*ACL - at highest point
of land*

Site consists of a land/structure interface. The land, mostly brown, yellow, orange in color rises or inclines sharply and then slopes up to a rounded peak. This land seems fairly high at the top. The structure appears to be located at the highest point of the land. There may be another associated structure $\frac{2}{3}$ way down the slope.

The top or on top of structure is a cone-shaped, dish-like object. associated with the structure is a feeling of pulsating energy and pulsating sound. There is also a feeling of sending and receiving energy/telemetry with this site.
